

Tuple

A tuple is a collection of data similar to a [Python list](#). The only difference is that we cannot modify a tuple once it has been created.

We create a tuple by placing items inside parentheses (). Tuple Characteristics

Tuples cannot be changed.

Tuples are faster than lists.

Tuples can be used as dictionary keys.

Tuples are:

- **Ordered** - They maintain the order of elements.
- **Immutable** - They cannot be changed after creation.
- **Allow duplicates** - They can contain duplicate values.

function of tuple

- Index
 - Count
 - Built in Function
1. sorted
 2. reversed
 3. min
 4. max
 5. sum
 - 6 Copy
