

modules comments pip

Modules

modules is a file containing code written by somebody(usually) which can be imported and used in our program.

Types of models

Are two types of models in Python

built In models : pre install in Python

Example : OS , abc etc

External models : need to install using pip

Example: numpy etc

Pip

Is a packet manager for Python .

we can use pip to install a module on our system.

exa : pip install flask

Comments :

Comments are used to write something which the program does not want to execute.

Types of comments

Single line comments: using '#'

Multiline comments: using ''' ''' or """ """
